# AUTOMATION

Innovation Through Automation

## Who We Are

Located in Co. Clare on the west coast of Ireland, iAUTOMATION specialises in the design and development of industrial automation solutions through the application of innovative technology.

Leveraging extensive experience gained in world class corporations such as Hewlett Packard, Wyeth, Johnson & Johnson and Boston Scientific, we successfully deliver solutions to our clients in projects ranging from medical device to material handling systems.

## What We Do

We provide total industrial automation solutions from system design through to commissioning and validation for a range of industrial clients.

We are committed to adding value to client systems through a combination of innovative technology support by high level in-house expertise and a comprehensive after sales service. We provide a range of services enabling our clients to meet all their automation requirements with a single vendor.

## Automation Solutions Structure

## Why choose iAutomation Software?

### Our Experience

We have built our experience working with world class organisations successfully delivering and supporting innovative automated manufacturing systems.

### Exceptional Service

We provide all the service required to define, deliver and support your automation systems. We endeavour to provide you with the most cost effective and efficient solutions.

### Partnerships

We focus on building client relationships that are enduring and mutually beneficial. We are committed to the advancement of your business.

**iAUTOMATION will work with you to optimise your investment in automated systems and to position your company for competitive advantage.**

## iAutomation Services

### ► Automation Consultancy

We advise and guide companies and individuals on the design and development of their automation strategies to ensure optimal performance of manufacturing systems. Our consultancy services can extend to a full manufacturing facility review or to integrate a new piece of technology with existing systems.

### ► Automation Design & Development

We have extensive experience in the design and development of automation systems using industrial standardised PLC and HMI packages. Across a variety of controller platforms, we have developed standardise software modules for system and component integration.

### ► System Integration

We provide system integration services to ensure that our automation solution fits seamlessly into your existing manufacturing systems. We have experience of integrating with various industrial components, including; robotics, servo motion controller, RFID technology and vision systems.

### ► System Validation

We provide our clients with a practical approach to the qualification and control of IT/Automation infrastructure. We execute and document projects from URS through to FAT/SAT in accordance with GAMP guidelines. Our comprehensive compliance model shall identify and address any gaps within the client's system.

### ► Supports

We provide system support throughout the project lifecycle including after sales support (including on-site and/or remote support), system upgrades, end user training and service level agreements. Our team works on-site or at our office as your needs require.
